

Company Profile:

WISCONSIN OVEN CORPORATION

*Dedicated to a tradition of fairness and respect for our customers, employees, and community.
Our team is guided by the timeless principles upon which our corporation was founded:
Quality, Service, and Integrity*

Wisconsin Oven Corporation, offering America's broadest range of industrial ovens, is located in East Troy, Wisconsin, southwest of Milwaukee and northwest of Chicago, just off of Highway I-43. Our main manufacturing operations and various subsidiaries and divisions are housed in our complex of eight buildings located in the East Troy Business Park. Wisconsin Oven Corporation employs the finest individuals, dedicated to quality, service, and customer satisfaction.

Customers worldwide can be served from our corporate headquarters in East Troy, and also via our dealers and representatives located throughout the world.

In addition to marketing under our own name, Wisconsin Oven Corporation is America's largest OEM supplier of industrial ovens. We produce equipment for over twenty (20) different companies, shipping the equipment under each of their specific brand-names. Our long history of serving and working with OEM and direct customers throughout the world attests to our ability and commitment to supply high quality equipment at competitive prices.

Company Profile:

WISCONSIN OVEN CORPORATION
America's broadest range of industrial ovens.

Our product lines are unsurpassed and serves all industries. Those products which are viable in the heat application area include, but are not limited to the following:

America's favorite batch ovens ~

Draw/Tempering Ovens and Furnaces: Standard SDB series used as a companion to integral quench furnace lines, available in temperatures of 500, 800, 1000, 1250, and 1400 degrees F., with skid, roller rail, full width rolls, piers, or shelves, available in gas or electric heat. Adaptations of this standard line include units suitable for use with inert atmosphere including cooling, multi-station units, push through units, special configurations, high uniformity units, and aluminum solution heat treat units, used with companion water quench equipment.

Atmosphere Batch Ovens: A wide range of semi-standard ovens in the above temperature ranges, used with inert atmospheres, including cooling and atmosphere control systems, for such applications as aluminum annealing, beryllium copper stress relieving and other types of metal treating where reduced oxygen atmospheres are required.

Batch Ovens, Walk-In Ovens, Hot or Cold Car Ovens: Beginning with Standard SWN, EWN and SWT series ovens with standard cars, swing or vertical doors on front and/or rear, to modified standards with different heating, circulation and uniformity modifications, and large custom designed units in 500, 800, 1000, and 1250 degree F. temperature ranges.

Conveyor Ovens: Semi-standard line of flat wire belt, mesh belt, roller, pusher, and many other types, in 500, 800, 1000, 1250, and 1400 degree F. temperature ranges. Units are available with various air flow configurations and heating capacities to suit specific requirements. These units can be tailored to the needs of many industries from electronics to aluminum forging.

America's broadest range of industrial ovens.

Aluminum Solution Heat Treating and Aging Ovens: Quick quench drop bottom type with traveling quench tanks or quench pit, meeting MIL specifications for temperature uniformity. For castings and forgings, front loading units with quench tanks where heavy sections allow slightly longer quench times. Conveyor units with continuous quench have also been supplied. Our solution heat treat ovens are metal rather than fiber lined. Aging ovens can be batch type with powered cars if required (see first product group), or trolley conveyor or other type continuous.

Finishing Ovens: Trolley conveyor ovens as well as spindle conveyor ovens are furnished as standard lines to the finishing industry. These include all types of single or multipass units for the variety of applications involved. We are unique in that we are almost always able to ship these in modules rather than field assembled as would many competitors.

Infrared Equipment: Infrared equipment is provided through our Wisconsin Infrared Systems Division and includes all types of Electric and Gas Infrared ovens, used for preheating, curing, drying and processes where fast heatup is required in a short time period. Conveyor and batch type systems are available. We have a complete infrared test facility to verify results on customer parts.

Print Plate Ovens: This line of ovens is primarily dedicated to the printing business for the preparation of print plates for printing presses. This line is a standard with the majority of the manufacturers of printing plates and suppliers to the printing industry worldwide.

Laboratory Equipment: In order to offer a more complete line of heating equipment, Wisconsin Oven Corporation is pleased to be an importer of laboratory ovens, water baths, sterilizers and incubators manufactured by Memmert GmbH & Co., Germany. These products have numerous applications in the medical, laboratory, and industrial fields. Memmert products incorporate many unique features not found in competing brands and have an excellent reputation for accuracy, quality and trouble free operation. Most Memmert products are in stock for immediate delivery.

Where large units or projects are concerned, Wisconsin Oven Corporation has been successful in shipping large sections for on site assembly, thereby eliminating extensive field construction and excessive installation time. Wisconsin Oven has experienced installation and service personnel available to provide assistance to our Customers worldwide.
